The Inventory of Statistical Standards in the Philippines (ISSiP) is a compilation of statistical standards used by various agencies in the Philippine Statistical System. The inventory intends to serve as web-based knowledge center and reference system for statistical standards available for use of the general public. It will be updated on a periodic basis to contain the latest statistical standards and classification systems.

Rationale

- Republic Act No. 10625 (Philippine Statistical Act of 2013)
 - Section 6 of the RA mandates the PSA to develop and maintain appropriate frameworks and as well promotion and adoption of statistical standards
- Roles of the PSA and PSS
 - Institutionalize coordination mechanisms for the development, maintenance, updating and monitoring of adoption of statistical standards and classification systems thru the Interagency Committee/Technical Committee, PSA Board and PSS Agencies
 - Adhere to the provisions on statistical standards of the United Nations Fundamental Principles of Official Statistics

What are statistical standards?

Based on the definition provided by the Statistical Data and Metadata Exchange (SDMX) Consortium, statistical standards are all agreed rules or guidelines on how one or more parts of the statistical business process should be carried out, conforming with requirements for professionalism.

Types:

- Statistical Concept - A statistical characteristic of a time series or an observation (OECD Glossary of Statistical Terms, 2003).
- Statistical Definition - Defines the statistical concept under measure and the organization of data, i.e. the type of variables included in the domain of study. It also refers to the description of deviations of the concept and definition from accepted statistical standard, guidelines, or good practice, when relevant (OECD Glossary of Statistical Terms, 2003).
- Statistical Methodologies and Procedures - Theory and methods of data collection, processing, dissemination and analysis (UNECE Classification of Statistical Activities – CSA Rev. 1, 2009)
- Statistical Classifications - A set of discrete, exhaustive and mutually exclusive observations, which can be assigned to one or more variables to be measured in the collation and/or presentation of data. These are used to collect and organize information into categories with other similar pieces of information. (United Nations Glossary of Classification Terms, 2013)

About the Inventory of Statistical Standards in the Philippines (ISSiP)

The ISSiP is a compilation of statistical standards used by various agencies in the Philippine Statistical System. The inventory intends serve as web-based knowledge center and reference system for statistical standards available for use of the general public. It will be updated on a periodic basis to contain the latest PSA-approved statistical standards classification system.
