

SPECIAL RELEASE

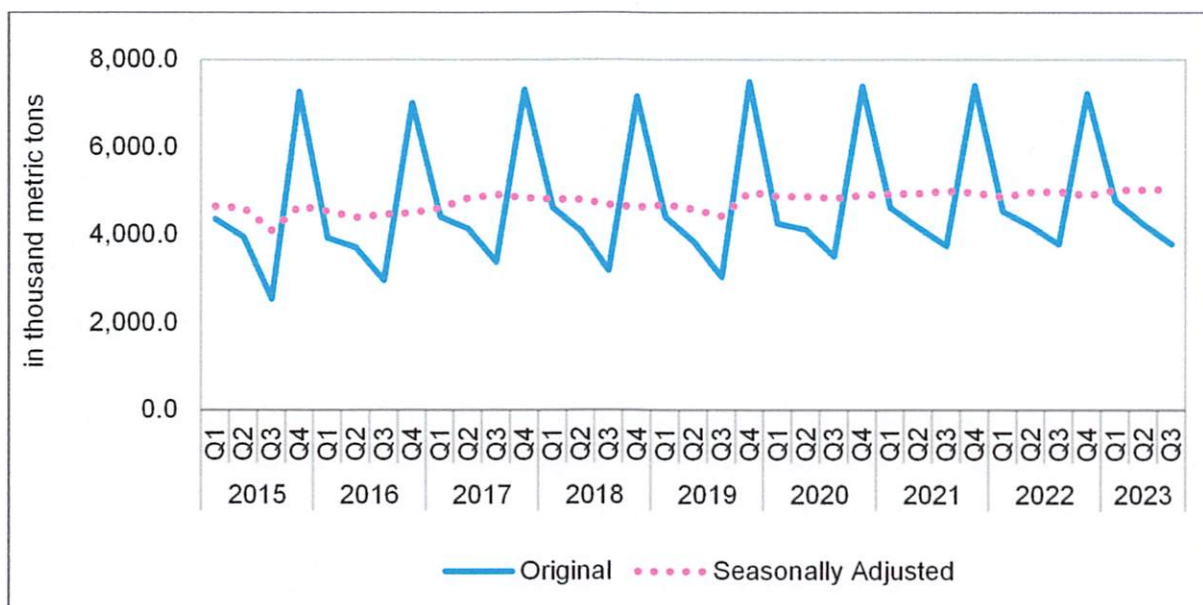

Seasonally Adjusted Palay/Rice Production and Prices July to September 2023

Date of Release: 09 November 2023
Reference No. 2023-SSO-194

PRODUCTION

The July to September 2023 seasonally adjusted palay production was recorded at 5.04 million metric tons. This indicates an increment of 0.4 percent from the previous quarter's seasonally adjusted estimate of production at 5.03 million metric tons. (Figure 1 and Table 1)

PRICE

For the third quarter of 2023, the seasonally adjusted farmgate price of palay was observed at PhP 20.24 per kilogram. This represents an increase of 7.9 percent from the preceding quarter's price of PhP 18.76 per kilogram. (Figure 2 and Table 2)

Technical Notes

The original series of palay production estimates are generated from the Palay Production Survey (PPS), which has conducted every first ten days of January, April, July, and October.

Starting the January to March 2022 release, the original series of palay prices are taken from the new series generated from the Farm Prices Survey. The data series used in the previous years' releases were from the discontinued survey of the Philippine Statistics Authority entitled Weekly Price Situationer of Selected Agricultural Commodities.

This special release features the seasonally adjusted (deseasonalized) palay production and price data series starting from the first quarter of 2014 using X-13 Auto-Regressive Integrated Moving Average (ARIMA) through the statistical software JDemetra+. The effect of seasonality has been removed from the original data to show the trend of palay production and farmgate price without being hampered by seasonal movements.

The decomposition model chosen for the palay production was additive of ARIMA (1,0,0) (0,1,0) with no logarithmic transformation. Moreover, the decomposition model for the farmgate price of palay was multiplicative of ARIMA (0,1,1) (0,1,1) with logarithmic transformation.
