

What is StatDev?

Statistical Indicators on Philippine Development (StatDev)

is a statistical indicator system that aims to monitor the likelihood of achieving the economic and social development goals set forth in the **Philippine Development Plan (PDP) 2017-2022** and corresponding **Results Matrices**.

CORE INDICATORS & HEADLINE TARGETS

- | | | |
|--|--|--|
| Gross Domestic Product (growth rates) sustained | Subsistence incidence (%) reduced | Youth unemployment rate (%) decreased |
| Gross National Income (growth rates) increased | Food inflation (%) kept stable | Underemployment rate in areas outside NCR (%) decreased |
| Poverty incidence (% of population) reduced | Unemployment rate (%) decreased | Global Innovation Index rank improved |

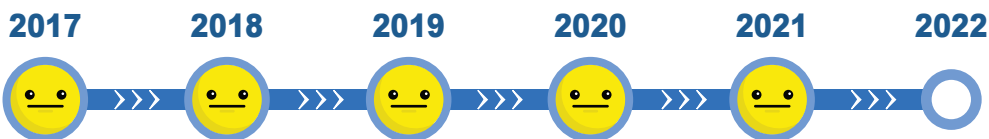

Core indicators and corresponding headline targets were identified to achieve the desired outcomes for the Plan period.

Interpretation on the Likelihood of Achieving the Target

- | | | |
|---|---|---|
| The chance of attaining the target is HIGH and, thus, the target is likely to be achieved. | The chance of attaining the target is MEDIUM and, thus, the target may or may not be achieved. | The chance of attaining the target is *LOW and, thus, the target is not likely to be achieved. |
|---|---|---|

***LOW** likelihood of achieving the targets does not necessarily mean that the end-of-plan target will not be met. The likelihood may improve as the actual data improve in succeeding years.

OVERALL PERFORMANCE

11 out of 15

sectors have **AT LEAST 50%** of their respective indicators exhibiting **MEDIUM to HIGH** likelihood of achieving the target in 2022
