The Output and Productivity is one of the eight modules of the Agricultural Indicators System (AIS). It provides information on productivity of the different components of the agricultural sector such as crops, livestock and poultry, and fisheries.

AGRICULTURAL PRODUCTION INDICES (2018=100)

These indices measure the changes in the volume of agricultural production in a given year compared with that of a base year.

CROPS

- PALAY: 101.2 (19.29 million metric tons)
- CORN: 104.5 (8.12 million metric tons)
- COCONUT: 98.4 (14.49 million metric tons)
- SUGARCANE: 98.7 (24.40 million metric tons)

LIVESTOCK AND POULTRY

- HOG: 92.4 (2.14 million metric tons)
- CATTLE: 87.0 (0.23 million metric tons)
- CARABAO: 84.1 (0.12 million metric tons)
- GOAT: 93.2 (71,718 metric tons)
- DAIRY: 112.7 (26,710 metric tons)
- CHICKEN: 98.5 (1.81 million metric tons)
- DUCK: 95.9 (29,548 metric tons)
- CHICKEN EGG: 113.5 (0.61 million metric tons)
- DUCK EGG: 108.3 (50,484 metric tons)

FISHERIES

- COMMERCIAL: 103.0 (0.98 million metric tons)
- MUNICIPAL: 99.7 (1.10 million metric tons)
- AQUACULTURE: 100.8 (2.32 million metric tons)

An index greater than 100 percent indicates that the production level in the reference year is higher by a certain percentage point from the base year. Less than 100 percent means that production is lower by a certain percentage point from the base year.

Index=101.2 means that production in 2020 is 1.2 percentage points higher than the base year (2018) production.

Index= 92.4 means that production in 2020 is 7.6 percentage points lower than the base year (2018) production.
