**TECHNICAL NOTES ON THE PREPARATION OF VALUE OF PRODUCTION IN THE PHILIPPINE AGRICULTURE AND FISHERIES REPORT**

The Value of Production in the Philippine Agriculture and Fisheries (formerly known as Performance of Philippine Agriculture) report presents the accomplishments of agriculture and fisheries during a particular reference period. The value of production is at constant 2018 prices and at current prices. The valuation is also done by commodity group (crops, livestock and poultry, and fisheries). These serve as inputs in the estimation of Gross Value Added (GVA) in agriculture and fishing.

The value of production in agriculture and fisheries covers all agricultural commodities, highlighting 22 commodities for crops, nine commodities for livestock and poultry, and 20 commodities for fisheries.

**A. Sources of Basic Data**

The generation of the value of production requires data on volume of production and farmgate prices. These data are sourced from the following PSA surveys and administrative-based records from other government agencies:

Variable	Source
1. Volume of Production by commodity	
a. Crops	Palay Production Survey (PPS)
	Corn Production Survey (CPS)
	Crops Production Survey (CrPS)
b. Livestock and Poultry by commodity	Backyard Livestock and Poultry Survey (BLPS)
	Commercial Livestock and Poultry Survey (CLPS)
c. Fisheries	Quarterly Municipal Fisheries Survey (QMFS)
	Quarterly Inland Fisheries Survey (QIFS)
	Quarterly Commercial Fisheries Survey (QCFS)
	Quarterly Aquaculture Survey (QAqS)
2. Farmgate Prices	
a. Crops	Farm Prices Survey (FPS)
	Palay Production Survey (PPS)
b. Livestock and Poultry	BLPS
	CLPS
c. Fisheries	QMFS
	QIFS
	QCFS
	QAqS
3. Administrative Data	
a. Volume of Production of Centrifugal Sugar and Raw Sugar	Sugar Regulatory Administration (SRA)
b. Dairy Production and Price for Goat and Cattle	National Dairy Authority (NDA)
c. Dairy Production and Price for Carabao	Philippine Carabao Center (PCC)
d. Volume and Value of Commercial Fish Unloadings	Philippine Fisheries Development Authority (PFDA), Local Government Units (LGUs), and Privately Managed Landing Centers
e. Volume and Value of Municipal Fish Unloadings	PFDA and LGUs

## B. Estimation Procedure

The valuation of agriculture and fisheries production is prepared quarterly. It is done as follows:

### At Constant 2018 Prices

Valuation at constant prices is done by multiplying the volume of production of each commodity by the 2018 average farmgate price.

Formula:

$$VP_o = Q_t \times FGP_o$$

Where:

$VP_o$  = Value of production at constant prices;

$Q_t$  = Volume of production for the current period; and

$FGP_o$  = Farmgate price at constant 2018 prices.

### At Current Prices

Valuation at current prices is done by multiplying the volume of production of each commodity by the average farmgate price during the reference period.

Formula:

$$VP_t = Q_t \times FGP_t$$

Where:

$VP_t$  = Value of production at current prices;

$Q_t$  = Volume of production for the current period; and

$FGP_t$  = Farmgate price at current prices.

The average prices of corn, coconut, banana, mango, tobacco, coffee, and onion are weighted using varietal classification, while cassava price is weighted by its use (i.e., food and industrial).

For sugarcane, there is no available data on sugarcane price. The PSA's Farm Prices Survey (FPS) generates prices of centrifugal sugar per kilogram, while the Sugar Regulatory Administration (SRA) releases data on volume of centrifugal sugar and raw sugar. Thus, the farmgate price of sugarcane was derived by multiplying the volume of raw sugar by the price of centrifugal sugar. The resulting value is multiplied by 0.65 to indicate that 65 percent of the total value of raw sugar produced is the value of the

product of agriculture. This is based on the prevailing 65-35 planter-miller sharing system. The total value credited to agriculture was divided to the total volume of sugarcane to derive the average price of sugarcane.

In the case of “other crops”, a set of indicator commodities was established. These indicator commodities are used to get the weighted price for “other crops”. It is derived by dividing total value of production by the total volume of production of the indicator commodities. This weighted price is used in computing the value of “other crops” production.

The prices of livestock and poultry are weighted using the type of farm (i.e., commercial and backyard).

For fisheries commodities, the prices are derived from the value of production at current prices divided by the volume of production of the reference year.

### **C. Definitions**

**Value of Production at Constant Prices** – refers to valuation of transactions, wherein the influence of price changes from the base year to the current year has been removed.

**Value of Production at Current Prices** – is the value based on prices during the reference period.

The value of **production in agriculture and fisheries at constant 2018 prices**, which amounted to PhP 427.69 billion, decreased annually by -1.3 percent in the second quarter of 2023. Value of crops, livestock, and poultry productions recorded increments compared with their values in the same quarter of the previous year. Meanwhile, the value of fisheries production exhibited a double-digit drop of -14.2 percent. From January to June 2023, the value of production in agriculture and fisheries at constant 2018 prices increased by 0.4 percent.

At current prices, the value of production in agriculture and fisheries was valued at PhP 551.50 billion or 3.4 percent higher compared with its level in the same period last year. (Figure 1, and Tables 1a, 2a, 4a, and 5a)

The value of **crop** production at constant 2018 prices was recorded at PhP 240.83 billion or 1.2 percent higher than the previous year’s same quarter level. It accounted for 56.3 percent of the total value of production in agriculture and fisheries. The value of palay production registered a 1.1 percent increase, while corn production posted a -0.8 percent contraction during the period.

Among the 20 highlighted commodities, increases in the value of production at constant 2018 prices were recorded for the following crop commodities:
