Vol. 16 No. 18 June 2012

THE UNDEREMPLOYED PERSONS in 2011

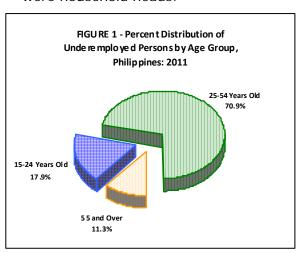

Underemployment is prevalent in many regions of the country particularly in areas where the agricultural sector continues to play a dominant role. In the Labor Force Survey (LFS), the underemployed are those employed persons who expressed the desire to have additional hours of work in their present job, or to have additional job, or a new job with longer working hours. Several studies suggest that poverty in the Philippines is associated with the problem of underemployment than unemployment.

This issue of LABSTAT Updates provides the data on the demographic and economic characteristics of the underemployed persons in 2011 generated from the LFS-Public Use Files of the National Statistics Office.

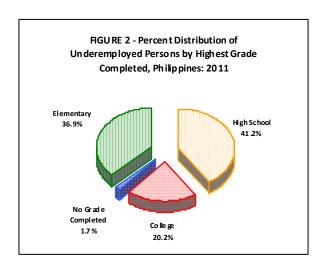

In 2011, the size of the underemployed was estimated at 7.163 million. They accounted for 19.3% of the 37.192 million employed.

Demographic Characteristics

- Majority of the underemployed were men (68.6%) and in the prime working age 25 to 54 years old (70.9%). (Figure 1)
- More than two-thirds (67.2%) were married and less than half (46.0%) were household heads.

■ Their level of education is quite low with the great majority having attended only elementary (36.9%) or high school (41.2%). Only 20.2% reached college while 8.6% completed college. (Figure 2)

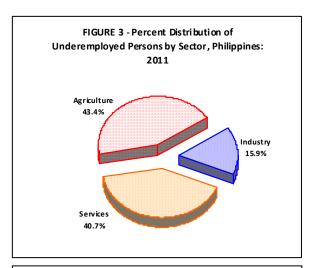

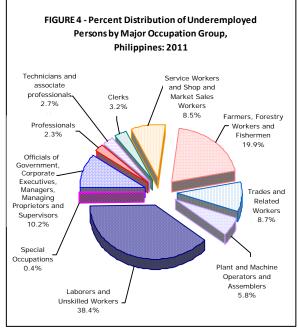

Economic Characteristics

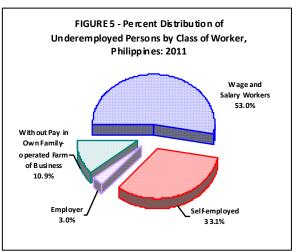

- Underemployment is most predominant in the agricultural sector (43.4%) and services sector (40.7%). (Figure 3)
- By major occupation group, laborers and unskilled workers (38.4%) and farmers, forestry workers and fishermen (19.9%) comprised the biggest shares of total underemployed. (Figure 4)
- By class of worker, more than half (53.0%) were in wage and salary employment with about two out of every five (43.3%) working for private establishments. About one-third (33.1%) were in self-employment. (Figure 5)
- The average daily basic pay of the underemployed in wage and salary employment was P257.80 or 18.8% lower than the average daily basic pay of all wage and salary workers (P317.44). It was also 21.9% lower than that of the wage and salary workers who were not underemployed (P330.09).
- Majority (58.6%) were engaged in parttime employment (worked less than 40 hours a week). The average weekly hours of work of the underemployed was reported at 32.6, which was 8.5 and 10.6 hours shorter that those for the total employed (41.1) and persons who were not underemployed (43.2), respectively.
- Bulk of the underemployed considered their jobs as permanent (70.5%) and only few (24.5%) were short-term in nature.

Overall Trend

■ The underemployment rate (proportion of underemployed persons to total employed) has been declining from 2005 to 2010 falling gradually from 21.0% to 18.8% (6.785 million to 6.762 million). However, in 2011 the average rate stood at 19.3% or about 7.163 million out of 37.192 million employed.
