Chicken Situation Report

REPUBLIC OF THE PHILIPPINES

PHILIPPINE STATISTICS AUTHORITY

SOLID · RESPONSIVE · WORLD CLASS

REPUBLIC OF THE PHILIPPINES

HIS EXCELLENCY

PRESIDENT FERDINAND ROMUALDEZ MARCOS, JR.

PHILIPPINE STATISTICS AUTHORITY

CLAIRE DENNIS S. MAPA, PhD

Undersecretary

National Statistician and Civil Registrar General

The Chicken Situation Report is a publication of the Philippine Statistics Authority (PSA).

TERMS OF USE OF PSA PUBLICATION

The Philippine Statistics Authority (PSA) reserves its exclusive right to reproduce all its publications in whatever form. All datasets and any presentations thereto, are free to be shared, copied, distributed, or adapted in any medium or format. Any part of this publication should not be reproduced, recopied, lent, or repackaged for commercial purposes under the Open Data with Creative Commons Attribution License (CC-BY-NC-SA) and if transform or build upon the material, shall be distributed under the same license as the original. The data user must give appropriate credit or acknowledgement to the PSA as the source agency of the datasets. Moreover, any information derived from the manipulation or misuse of the requested data shall no longer be the responsibility of the PSA.

ISSN-2546-0625

FOREWORD

The Chicken Situation Report presents the industry situation in terms of inventory by classification, volume and value of production, number of birds dressed in poultry dressing plants, volume and value of chicken meat imports, and monthly average farmgate and retail prices.

The Philippine Statistics Authority (PSA) disseminates the Chicken Situation Report annually, with the previous year as the reference period. The report serves as a ready reference for various clients and stakeholders of PSA.

The PSA would appreciate comments and suggestions from our data users and readers for further improvement of this report.

HIGHLIGHTS

A. Chicken

1. Volume of Production

a. National

The total chicken production in 2023 was estimated at 1.95 million metric tons, liveweight, indicating an annual growth rate of 4.3 percent from the previous year's output of 1.87 million metric tons, liveweight. This level of production in 2023 was a further expansion from the 7.0 percent annual growth rate in 2022. (Figure 1 and Table 1)

b. Provincial

Bulacan was the highest producer of chicken in 2023 with a production of 194.57 thousand metric tons, liveweight, followed by Pampanga with 157.31 thousand metric tons, liveweight, and Tarlac with 136.78 thousand metric tons, liveweight. Completing the top 10 producing provinces were Nueva Ecija, Batangas, Bukidnon, Quezon, Rizal, South Cotabato, and Misamis Oriental. These provinces accounted for 54.8 percent of the country's total chicken production in 2023. (Figure 2 and Table 3)

Prices

a. Farmgate Price

The annual average farmgate price of broiler chicken in 2023 was registered at PhP 132.77 per kilogram, liveweight. It posted a decrease of 0.4 percent from the previous year's average farmgate price of PhP 133.29 per kilogram, liveweight. (Table 4)

The highest average farmgate price of broiler chicken in 2023 was recorded in June at PhP 140.25 per kilogram, liveweight, while the lowest was quoted in July at PhP 126.67 per kilogram, liveweight. (Figure 4 and Table 4)

Figure 4. Monthly Average Farmgate Prices of Broiler Chicken

^r – revised

^p – preliminary

Sources: Philippine Statistics Authority, 2021 Farm Prices Survey (FPS), 2022 – 2023 BLPS, and 2022 – 2023 CLPS

b. Retail Price

The average retail price of fully dressed broiler chicken in 2023 at PhP 200.02 per kilogram was 3.5 percent higher compared with the previous year's average retail price of PhP 193.21 per kilogram. (Table 5)

The highest average retail price of fully dressed broiler chicken during the year was recorded in January 2023 at PhP 206.23 per kilogram, while the lowest was registered in July 2023 at PhP 195.85 per kilogram. (Figure 5 and Table 5)

Figure 5. Monthly Average Retail Prices of Fully Dressed Broiler Chicken
Philippines: January to December 2021 – 2023^P

^P – preliminary

Source: Philippine Statistics Authority, Retail Price Survey (RPS) for the Generation of Consumer Price Index

2. Value of Production

In 2023, the gross value of chicken production at current prices amounted to PhP 250.69 billion, indicating an increase of 6.7 percent compared with the 2022 gross receipts of PhP 234.89 billion.

At constant prices, chicken production generated a gross value of PhP 181.01 billion in 2023, registering a 4.2 percent increase from its previous year's value of PhP 173.67 billion. (Table 6)

3. Imports

The total volume of imported chicken meat in 2023 reached 407.92 thousand metric tons, indicating a 6.1 percent decline from the recorded level of 434.25 thousand metric tons in 2022. The highest importation of chicken meat in 2023 was noted in the period of July to September at 108.12 thousand metric tons.

The value of imported chicken meat in 2023 amounted to USD 458.82 million. This was lower by 12.9 percent from the previous year's record of USD 527.08 million. The highest value of imported chicken was reported during the period of April to June 2023 at USD 123.12 million. (Table 7)

B. Chicken Egg

1. Volume of Production

a. National

In 2023, the total chicken egg production was estimated at 731.36 thousand metric tons. This indicates an annual growth rate of 3.2 percent from the previous year's level of 708.50 thousand metric tons. This was a further expansion in chicken egg production after its 9.2 percent and 7.1 percent annual increases in 2021 and 2022, respectively. (Figure 6 and Table 8)

Figure 6. Volume and Annual Growth Rate of Chicken Egg Production
Philippines: January to December 2021 – 2023^p

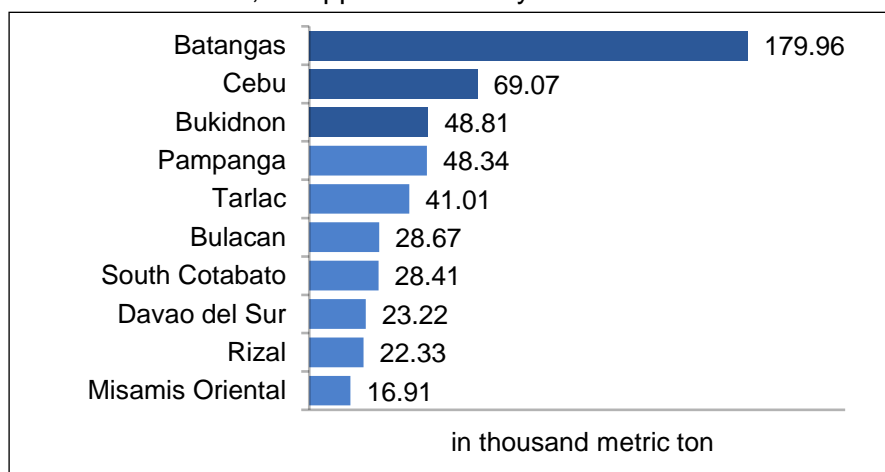

^p – preliminary

Sources: Philippine Statistics Authority, BLPS and CLPS

b. Provincial

Batangas was the top producer of chicken egg in 2023 with 179.96 thousand metric tons, followed by Cebu with 69.07 thousand metric tons, and Bukidnon with 48.81 thousand metric tons. The other top producing provinces were Pampanga, Tarlac, Bulacan, South Cotabato, Davao del Sur, Rizal, and Misamis Oriental. These provinces accounted for 69.3 percent of the country's total chicken egg production in 2023. (Figure 7 and Table 10)

2. Prices

a. Farmgate Price

The annual average farmgate price of chicken egg in 2023 was registered at PhP 7.34 per piece, posting an annual increase of 20.2 percent from the previous year's average farmgate price of PhP 6.11 per piece. (Table 11)

In October 2023, the average farmgate price of chicken egg reached its highest mark at PhP 7.63 per piece, while the lowest average farmgate price was recorded in June 2023 at PhP 6.96 per piece. (Figure 9 and Table 11)

Figure 9. Monthly Average Farmgate Prices of Chicken Egg
Philippines: January to December 2021^r – 2023^p

r – revised

p – preliminary

Sources: Philippine Statistics Authority, 2021 FPS, 2022 – 2023 BLPS, and 2022 – 2023 CLPS

b. Retail Price

The average retail price of chicken egg, registered at PhP 8.53 per piece in 2023, was 14.0 percent higher than the average retail price of PhP 7.48 per piece in 2022. (Table 12)

The highest average retail price of chicken egg was quoted in December 2023 at PhP 8.86 per piece, while the lowest average retail price was registered in January 2023 at PhP 8.27 per piece. (Figure 10 and Table 12)

Figure 10. Monthly Average Retail Prices of Chicken Egg
Philippines: January to December 2021^r – 2023^p

^r – revised

^p – preliminary

Source: Philippine Statistics Authority, RPS for the Generation of Consumer Price Index

3. Value of Production

In 2023, the gross value of chicken egg production at current prices was recorded at PhP 100.72 billion. It exhibits an increase of 15.7 percent compared with the 2022 gross receipts of PhP 87.09 billion at current prices.

At constant prices, chicken egg production generated a gross value of PhP 73.07 billion in 2023, exhibiting a 3.3 percent increase from its previous year's value of PhP 70.76 billion. (Table 13)

TECHNICAL NOTES

TECHNICAL NOTES

I. Introduction

The Chicken Situation Report presents the industry situation in terms of volume and value of production, monthly average farmgate and retail prices, and volume and value of chicken imports. It serves as a ready reference for the various clients and stakeholders of the Philippine Statistics Authority (PSA).

The data for this report were collected by PSA through the two surveys, namely, Backyard Livestock and Poultry Survey (BLPS) and the Commercial Livestock and Poultry Survey (CLPS). Both surveys are conducted quarterly in all provinces, including National Capital Region (NCR).

The BLPS aims to generate estimates on the supply and disposition of livestock and poultry commodities at the household level. In 2023, the number of sample households covered was 21,783 from the 1,156 sample barangays nationwide. On the other hand, the CLPS seeks to generate estimates on the supply and disposition of livestock and poultry commodities from sample establishments. There were 706 sample establishments for layer chicken, 919 sample establishments for broiler chicken, 140 sample establishments for native/improved chicken, and 155 sample establishments for gamefowl in 2023.

The data on the number of chicken dressed in dressing plants were sourced from the Compilation of Data from Slaughterhouses and Poultry Dressing Plants (CDSPDP), an administrative-based activity of the PSA. This activity covers 297 licensed to operate meat establishments (LTOMEs) and 1,007 Locally Registered Meat Establishments (LRMEs) nationwide. This is undertaken in coordination with the National Meat Inspection Service (NMIS) and the Local Government Units (LGUs).

II. Data Collection

A. Backyard Livestock and Poultry Survey

1. Data collection procedure

The field data collection was every first seven (7) days of the month after the reference quarter. However, the data collection for fourth quarter is done one (1) month earlier to comply with the Philippine System of National Accounts (PSNA) calendar. The data collection was undertaken by hired Statistical Researchers (SRs) through face-to-face interview with qualified respondents of the sample households. Prior to data collection, training of selected personnel from Field Offices, including SRs, was conducted to ensure uniform understanding of concepts and proper implementation of survey procedures. Field and manual editing of the accomplished questionnaires was done to ensure completeness, consistency, and reasonableness of the information gathered.

2. Survey Questionnaire

The BLPS Questionnaire is a 19-page form composed of 16 blocks that aims to gather information on the basic characteristics and operations of the household.

The data items included in the survey are as follows:

- a. Type of household operation/purpose
- b. Inventory by age
- c. Breeder that gave birth
- d. Supply indicator (number of births, received/acquired, hatched live)
- e. Slaughtered/Dressed in the household
- f. Sold live for slaughter/dressing
- g. Sold live for other purposes (breeding, fattening)
- h. Average farmgate price
- i. Egg production indicators for poultry
- j. Milk production indicators for carabao, cattle, and goat
- k. Deaths/Losses
- l. Average liveweight per head/bird
- m. Disposition by areas of destination
- n. Assessment of household's production

B. Commercial Livestock and Poultry Survey

1. Data collection procedure

The schedule of field data collection was during the last 10 days of the quarter. However, the data collection for the fourth quarter is done one (1) month earlier to comply with the PSNA calendar. The data collection was undertaken by hired SRs through face-to-face interview with qualified respondents of the establishments. Prior to data collection, training of Field Office personnel, including SRs, was conducted to ensure that the procedures and concepts of the survey are understood and properly implemented. Field and manual editing of the accomplished questionnaires was done to ensure completeness, consistency, and reasonableness of the information gathered.

2. Survey Questionnaire

The CLPS Survey Questionnaires for broiler chicken, layer chicken, and native/improved chicken aim to gather necessary information on supply and disposition of animals tended/raised in commercial establishments.

The data items included in the survey are as follows:

- a. Type of establishment operation
- b. Inventory by age
- c. Supply indicator (hatched live, received/acquired)
- d. Dressed in the establishment
- e. Sold live for dressing
- f. Sold live for other purposes (breeding, fattening)
- g. Average farmgate price

- h. Egg production indicators
- i. Deaths/Losses
- j. Average liveweight per bird
- k. Disposition by areas of destination
- l. Assessment of establishment's production

C. Compilation of Data from Slaughterhouses and Poultry Dressing Plants

1. Data collection procedure

The schedule of field data collection is during first 10 days of the month and was undertaken by regular Provincial Statistics Office (PSO) personnel. The data was obtained from the administrative records of NMIS and LRME supervised by the LGUs.

2. Collection Forms

The collection forms used in CDSPDP consists of two (2) forms, namely CDSPDP Form 1a (Livestock) and CDSPDP Form 1b (Poultry). These forms aim to gather information on the number of livestock and poultry commodities slaughtered/dressed in slaughterhouses/poultry dressing plants.

The data items included are as follows:

- a. Number of Heads/Birds
- b. Total Carcass/Dressed weight

III. Sampling Design

A. Backyard Livestock and Poultry Survey

1. Sampling Frame

The BLPS sampling frame is based on the results of the 2017 Listing of Farm Households (LFH) and 2012 Census of Agriculture and Fisheries (CAF). For barangays not covered in the 2017 LFH, the list of households was taken from the 2012 CAF. The sampling frame is updated quarterly based on the status of the sampled households using structured Frame Maintenance Form (FMF) submitted by the Provincial Statistical Offices every quarter.

2. Sample Selection Procedure

The BLPS uses two-stage sampling design. The first stage is the selection of sample barangays or Primary Sampling Units (PSUs) using probability proportional to size, where the measure of size is the total animal inventory.

The second stage is the selection of sample households or Secondary Sampling Units (SSUs) that are engaged in livestock and poultry raising in the sampled barangays using systematic sampling.

The number of sample households per selected barangay is 20 but this could be less if the selected barangay has less than 20 households. The sample households per quarter are independent.

The sample size was determined based on a five percent (5%) target coefficient of variation.

3. Domain

The domain of the survey is the province. In the case of NCR, the region is the domain.

4. Estimation Procedure

a. Survey Weight

a.1. Base Weight

a.1.1. PSU Weight

The PSU weight is computed as follows:

$$w_{1i} = \frac{X}{aX_i}$$

where:

- w_{1i} = PSU weight
- a = barangay sample size for the province
- X = total animal inventory for the province
- X_i = animal inventory of barangay i
- i = subscript for barangay

a.1.2. SSU Weight

The SSU weight is computed as follows:

$$w_{2ij} = \begin{cases} \frac{N_i}{n_i} & , \text{if household } j \text{ has at most 3 operators} \\ \frac{N_i}{n_i} \times \frac{M_{ij}}{m_{ij}} & , \text{if household } j \text{ has greater than 3 operators} \end{cases}$$

where:

- w_{2ij} = SSU weight
- N_i = total number of households in barangay i
- n_i = number of sample households in barangay i
- M_{ij} = total number of operators in household j of barangay i
- m_{ij} = number of sample operators in household j of barangay i
- j = subscript for household

a.1.3. Base Weight

The base weight is the product of the PSU and SSU weights. That is,

$$W_{ij} = w_{1i} \times w_{2ij}$$

where:

w_{ij} = base weight of household j in barangay i

w_{1i} = PSU weight

w_{2ij} = SSU weight

a.2. Adjustment Factor

The adjustment factor to account for non-response is given as follows:

$$A_p = \frac{\sum_{i=1}^a \sum_{j=1}^{n_i} w_{ij} X_{1ij}}{\sum_{i=1}^a \sum_{j=1}^{n_i} w_{ij} X_{2ij}}$$

where:

A_p = adjustment factor for province p

X_{1ij} = eligible status of household j in barangay i (1 if eligible, 0 otherwise)

X_{2ij} = responding status of household j in barangay i (1 if responding, 0 otherwise)

Eligible households are the following:

- a. Interview completed;
- b. Refused to be interviewed without replacement;
- c. Temporarily away/Not at home without replacement; and
- d. HH temporarily not accessible without replacement.

Ineligible households are the following:

- a. Resides outside the barangay;
- b. Unknown in the locality; and
- c. Deceased (No other livestock and poultry operator in the household).

a.3. Final Weight

The final weight formula is given as follows:

$$w'_{ij} = w_{ij} \times A_p$$

where:

w'_{ij} = final weight for province p

w_{ij} = base weight of household j in barangay i

A_p = adjustment factor for province p

b. Estimation of Total

b.1. Estimation of Provincial Total

b.1.1. Estimation of provincial total is done per animal type and the formula is given as follows:

$$\hat{Y}_p = \sum_{i=1}^a \sum_{j=1}^{n_i} w'_{ij} y_{ij}$$

where:

\hat{Y}_p = estimated total for province p

y_{ij} = survey data (inventory, production, etc.) for household j in barangay i

b.1.2. For the average farmgate price, the provincial estimate is computed by summing up the product of farmgate prices and its corresponding final weight. The result is then divided by the sum of the final weight of all sample households with responses in farmgate price. The formula is given as follows:

$$\hat{F}_p = \frac{\sum_{i=1}^a \sum_{j=1}^{n_i} w'_{ij} z_{ij}}{\sum_{i=1}^a \sum_{j=1}^{n_i} w''_{ij}}$$

where:

\hat{F}_p = average farmgate price of the province

z_{ij} = survey data (average farmgate price) for household j in barangay i

w''_{ij} = final weight of household j with response in average farmgate price

b.2. Estimation of Regional and National Total

b.2.1. The regional estimates are obtained by aggregating the estimates for the provinces within the region, while the national estimate is derived by adding all the regional estimates obtained in each region.

b.2.2. The computation of regional and national farmgate prices is similar with that of the provincial farmgate price.

B. Commercial Livestock and Poultry Survey

1. Sampling Frame

The CLPS frame is based on the results of the 2021 Updating of the List of Establishments (ULE). It is updated quarterly based on the results of visit of the sample establishments using the FMF.

2. Sample Selection Procedure

The CLPS uses stratified probability proportional to size sampling design, where the establishment is the primary sampling unit. The animal type serves as a stratification variable and the size measure is the maximum farm/housing capacity of the establishment. Per animal type, the establishments are sorted by maximum farm/housing capacity and sample establishments are selected using systematic sampling. A panel sample establishment is maintained for a year and a new set of samples is selected during the first quarter of the next year.

Complete Enumeration (CE) is applied for provinces with less than 25 commercial establishments, otherwise, sampling is used.

3. Domain

The domain of the survey is the province. In the case of NCR, the region is the domain.

4. Estimation Procedure

a. Survey Weight

a.1. Base Weight

The base weight per animal type is given as follows:

$$w_i = \frac{X}{aX_i}$$

where:

w_i = base weight of establishment i

a = number of sample establishments in the province

X_i = maximum farm/housing capacity of establishment i

X = total maximum farm/housing capacity of the province

a.2. Adjustment Factor

The adjustment factor to account for non-response is given as follows:

$$A_p = \frac{\sum_{i=1}^a w_i X_{1i}}{\sum_{i=1}^a w_i X_{2i}}$$

where:

A_p = adjustment factor for province p

X_{1i} = eligible status of establishment i (1 if eligible, 0 otherwise)

X_{2i} = responding status of establishment i (1 if responding, 0 otherwise)

Eligible establishments are the following:

- a. Operational
- b. Refusal
- c. Cannot be contacted/Not accessible

Ineligible establishments are the following:

- a. Temporarily Stopped Operation
- b. Permanently Closed/Stopped Operation
- c. Shifted Farm Operation
- d. Cannot be Located
- e. Duplicate
- f. Out of scope - Recreation
- g. Out of scope - Change Sector
- h. Out of scope - Main Office/Ancillary Unit

a.3. Final Weight

The final weight formula is given as follows:

$$w'_i = w_i \times A_p$$

where:

w'_i = final weight of establishment i

w_i = base weight of establishment i

A_p = adjustment factor for province p

b. Estimation

b.1. Estimation for the Province

b.1.1. Estimation of provincial total is done per animal type and the formula is given as follows:

$$\hat{Y}_p = \sum_{i=1}^a w'_i y_i$$

where:

\hat{Y}_p = estimated total for province p

y_i = survey data (inventory, production, etc.) for establishment i

b.1.2. For the average farmgate price, the provincial estimate is computed by summing up the product of farmgate prices and its corresponding final weight. The result is then divided by the sum of the final weight of all sample households with responses in farmgate price. The formula is given as follows:

$$\hat{F}_p = \frac{\sum_{i=1}^a w'_i z_i}{\sum_{i=1}^a w''_i}$$

where:

\hat{F}_p = average farmgate price of the province

z_{ij} = survey data (average farmgate price) for establishment i

w''_i = final weight of establishment i with response in average farmgate price

b.2. Estimation of Regional and National Total

b.2.1. The regional estimates are obtained by aggregating the estimates for the provinces within the region, while the national estimates are derived by adding all the regional estimates obtained in each region.

b.2.2. The computation of regional and national farmgate prices is similar with that of the provincial farmgate price.

IV. Concepts and Definitions of Terms

Farmgate price refers to the price received by raisers for their produce at the location of farm. Thus, marketing costs, such as the transport and other marketing costs (if any) incurred in selling the produce, are not included in the farmgate prices.

Inventory refers to the actual number of animals present in the farm as of a specific reference date.

Volume of production refers to the number of tended/raised animals disposed for slaughter/dressing, including those which were shipped out for slaughter. This is expressed in metric tons, liveweight.

V. Farm Classification

The following are the new farm classifications and definitions based on the approved PSA Board Resolution No. 04, series of 2022.

Animal Type/ Classification	Definition
Broiler Chicken	
Smallhold	Raising 500 birds and below
Semi-commercial	Raising 501 – 10,000 birds
Commercial	Raising 10,001 birds and above
Layer Chicken and Native/Improved Chicken	
Smallhold	Raising 250 birds and below
Semi-commercial	Raising 251 – 5,000 birds
Commercial	Raising 5,001 birds and above

The data on the inventory of chicken based on the definitions indicated above can be accessed in the OpenStat website of PSA with the link: <https://bit.ly/chicken-inventory-classification>

Similarly, data on inventory of chicken by farm type (i.e., backyard and commercial) can still be accessed in the OpenStat website with the link: <https://bit.ly/chicken-inventory-type>

VI. Dissemination of Results and Revision

The PSA disseminates the Chicken Situation Report annually, with previous year as the reference period. This report is uploaded in the PSA Website.

The livestock and poultry statistics follows the revision policy as stipulated in the PSA Board Resolution No. 1, Series of 2017-119 approving the revision of quarterly estimates on agricultural production, prices, and related statistics to be limited to the immediately preceding quarter and for the past three years with quarterly breakdown to be done only during May of the current year.
